

MANAGED FIREWALL SERVICES BUILDING A FORTRESS AROUND YOUR NETWORK AND EQUIPMENT

Viruses, worms, hackers, terrorists, disgruntled employees – how susceptible are you to such attacks? The Internet is constantly being scanned for vulnerable networks and computer systems. Did you know that antivirus software alone cannot prevent a true worm from infecting your system?

Are you aware that many system breaches can be prevented with an effective security policy? Data Foundry is. And we also know that a firewall solution is a critical and necessary component of any effective security plan. At Data Foundry we offer technologically advanced products and services so you can work on your computer without the fear of intruders lurking in the darkness of your network.

And with increased profitability and revenue growth each year since the company was launched in 1994, Data Foundry engineers are able to concentrate on providing you the highest-quality monitoring and management. Data Foundry will be around tomorrow – and we want you to be there with us.

Dedicated Hardware Firewall – Data Foundry deploys Cisco® PIX hardware firewalls with a proven track record, performance history and overall reliability. Data Foundry offers a range of hardware firewalls to meet the needs of small offices to large enterprises.

Shared Hardware Firewall – Data Foundry's shared solution is based on redundant Cisco PIX hardware firewalls. Customers are provisioned either single or dual Fast Ethernet feeds into their hosting environment and are assigned IP addressing according to individual requirements, network architectures and Data Foundry usage guidelines.

Software Firewall – Implemented on Data Foundry-approved routing platforms, software firewalls offer packet-filtering based on both network addressing and application port information.

FEATURE	FUNCTION	BENEFIT
Stateful Inspection	Adaptive Security Algorithm (ASA) is used to analyze data. What this means is that each packet is evaluated against information collected from all seven communication and application layers.	Stateful inspection is a sophisticated technique that provides better security than packet-filters which analyze communications in isolation without information from the application layers.
Redundant Hardware Firewall Option	Create redundancy by configuring your solution with two firewalls to run concurrently.	Provides automatic failover protection in the event of a problem with your primary firewall.
On-Site Spares	If Data Foundry supplies your firewall, we will also have an on-site spare that can be automatically configured with your specifications.	In the event of a problem with your primary firewall, a backup firewall will be up and running in minimal time.
Critical-Event Notification	If an outage occurs, Data Foundry will notify you.	You are kept informed on the status of your solution.
Secure Off-Site Storage of Configuration Backup Data	We always store your specific configuration backup data so that we can automatically reconfigure a new firewall if necessary.	Dramatically lessens the time to get a new firewall up and running.

PROACTIVE FIREWALL MANAGEMENT AND CUSTOMER SUPPORT

Our team of certified network engineers provides first-class firewall management based on best practices. They help you set up your initial security policy and eliminate the need to maintain a staff of network security professionals to manage your firewalls in-house. Data Foundry is also proud to say we have a solid history of rapid provisioning. Our customers do not wait on us.

Customer Support – Data Foundry’s network engineers are available 24x7x365 to give you the highest level of support. Requests for policy additions and/or changes can be initiated by either phone or e-mail and are completed within 24 hours.

Service Level Agreements (SLAs) – Data Foundry is confident about the reliability and performance of our firewall solutions, but we want to provide you with the utmost peace of mind, which is why we give you a 100% network availability guarantee.

HIGH PERFORMANCE FIREWALLS

Keeping intruders out requires that your security policy, software, and equipment are more up-to-date than the technology at the hands of your attackers. Addressing this challenge, Data Foundry offers state-of-the-art firewalls with expert monitoring and management.

A RANGE OF MANAGED FIREWALL SERVICES

Whether you choose to implement a firewall in one of our data centers or at your premises, Data Foundry has a variety of solutions from which you can choose. Of course, we monitor and manage your solution 24x7x365.

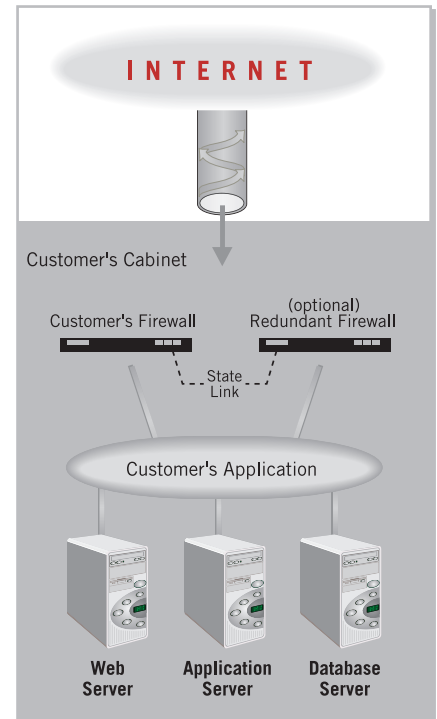

LET DATA FOUNDRY BE THE LAST BUSINESS ISP YOU’LL EVER NEED

We invite you to learn more about our industry expertise, technical leadership and exceptional services. Data Foundry wants to help you protect your data with a high performance firewall solution. Please call us at 1-888-TEXAS94 or visit our Web site at www.datafoundry.com.

CUSTOMER TESTIMONIAL

“After the sudden and unexpected death of our PIX firewall/router, we were left in a rather unpleasant situation. Without having a failover or replacement component in place, our business came to a temporary standstill. The staff at Data Foundry went above and beyond the call of duty to assist us, and we are extremely grateful for their assistance and their commitment to customer satisfaction.”

Dave Richkun
Director of Research & Development, Psyquel, LP

THE DATA FOUNDRY WAY

- Policy additions and/or changes completed within 24 hours
- 100% network availability guarantee
- Rapid Provisioning in 24 hours or less
- 24 x7 x365 Monitoring
- Dedicated team of Cisco® Certified Engineers to deploy, configure and monitor your firewall solution
