

MANAGED BACKUP

*Data protection for the
modern enterprise*

DATA FOUNDRY
MANAGED SERVICES

Data Foundry Network Management

Today's business environment increasingly requires constant availability of business-critical data. In the absence of disaster preparedness, organizations face risks associated with loss of revenue, customer satisfaction, compliance, and brand reputation. Additional factors such as exponential data growth, constant pressure around audits and regulatory compliance, and limitations to IT capital and operating budgets contribute to the growing demand for a comprehensive data protection strategy. With Data Foundry's managed backup service, you can simplify and efficiently manage complex and growing stores of data, freeing up resources to focus on your core business, all the while knowing your data is protected and always available.

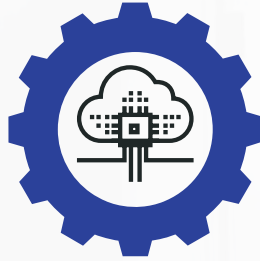

Backup and recover
terabytes of data in
minutes, not hours.

No More Silos

Our Managed Backup service provides complete backup coverage in one solution for:

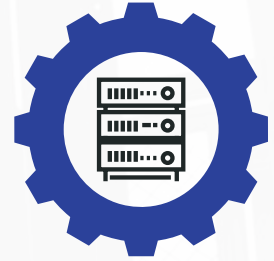

Databases

VMs and cloud storage

Business applications

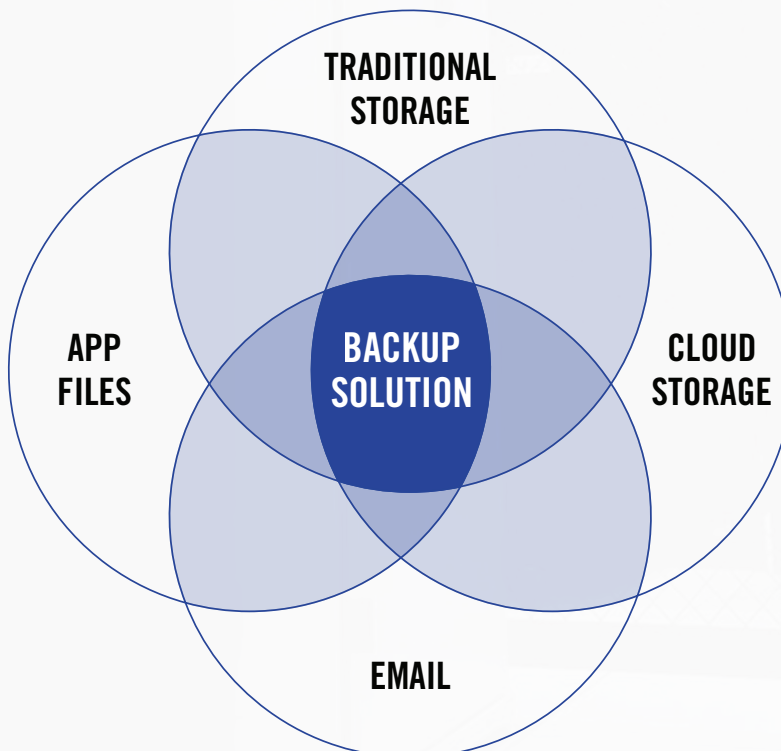

File servers & storage arrays

ERP applications

ORACLE

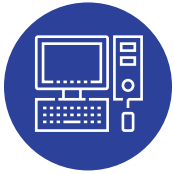

The all-in-one storage solution

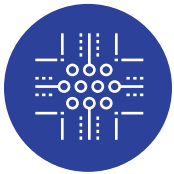

Database Backup

Our Managed Backup service enables backup, recovery and cloning/replication of all types of databases, including those at the core of your business critical enterprise applications. Not only can you back up and restore “classic” databases, such as Oracle, Microsoft SQL Server, IBM DB2 and MySQL, but our software will also give you the ability to protect today’s cross-platform, open-source databases, including MongoDB and PostgreSQL.

ERP Integration

Managed Backup customers see a 67–87% improvement in average recovery time for application data on systems such as Oracle and SAP. Our software’s deep application integration eliminates your need for multiple backup and recovery point products, boosting efficiency and removing the burden of having to maintain legacy systems in parallel. The portability and flexibility of the data we backup allows for faster dev/test iterations, increasing your rate of innovation and accelerating time-to-market.

VM Backup

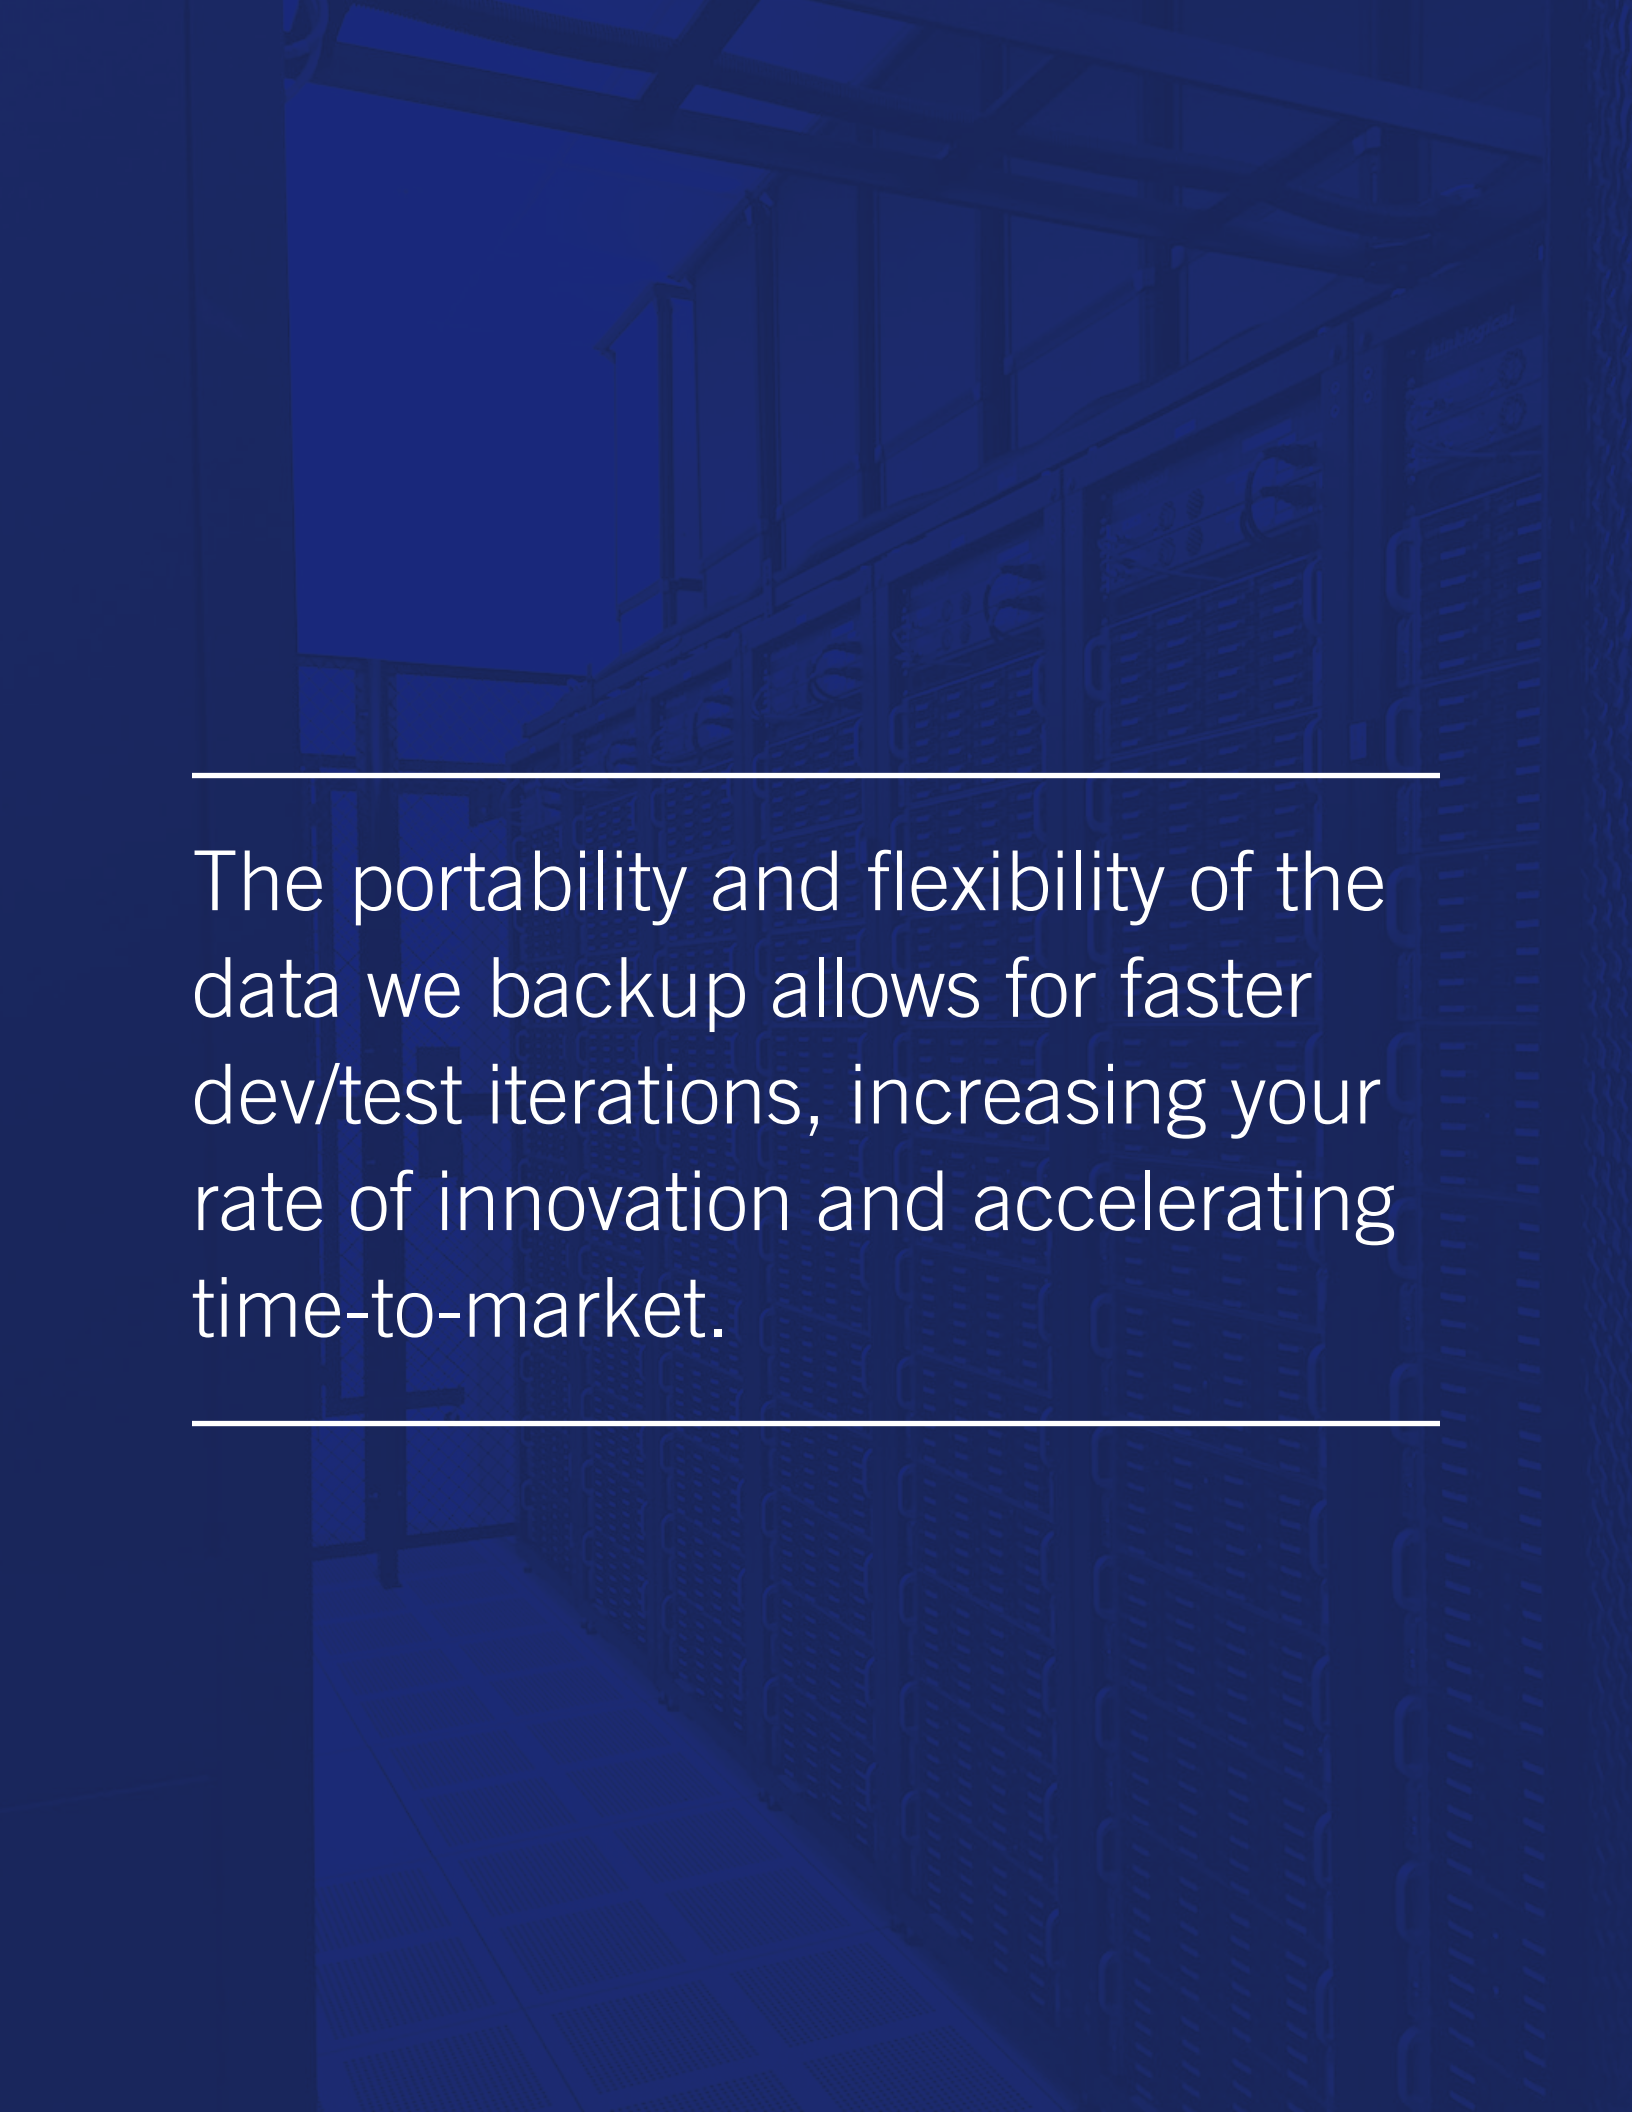

Our single software takes the complexity out of managing VMs across evolving lifecycles. By treating every VM uniquely, we make sure you meet each VM’s workload recovery and retention requirements with a single solution that has no hidden costs. We enable you to streamline and automate the management of your platform and ensure that no VM goes unprotected.

Cloud Recovery

Use our managed backup service to back up your instance in the cloud. Our backup solution supports more than 20 cloud platforms, allowing you to back up data, apps and workloads running in Azure, AWS, Google and more. Our solutions facilitates and optimizes cloud-based disaster recovery strategies.

ASK ABOUT ROLE-BASED SEARCH AND E-DISCOVERY FEATURES.

The portability and flexibility of the data we backup allows for faster dev/test iterations, increasing your rate of innovation and accelerating time-to-market.

Key Benefits

Our modular architecture provides **scalability** and ensures that processes can scale out to match business needs in an incremental building block design.

- **Backup and recover terabytes of data in minutes, not hours**
- **Meet regulatory compliance**
- **Reduce backup complexity**
- **Free up on-site infrastructure**
- **Increase scalability**
- **Define your own recovery objectives**

Broad hypervisor and OS platform support:

Flexible, Secure and Easy-to-Use Features

- 256-bit end-to-end encryption
- Built-in deduplication and compression
- Scheduled reporting
- Customize by vertical – medical and legal compliance-specific tools
- Easily add capacity and features as you grow

Magic Quadrant for Data Center
Backup and Recovery Software
