Microsoft Azure

Your Private Connection to the Cloud

Many companies find that a combination of public and private cloud resources is the ideal infrastructure strategy. Data Foundry supports your hybrid cloud strategy by providing secure, private connections to the cloud through our CloudTap service. We set up cross-connects that allow you to securely tap into your public cloud resources through your data center deployment, corporate offices or both to access the cloud providers of your choice without traversing the public Internet.

It's Quick and Easy

1 — Contact your sales rep. → 2 — Provide your public cloud information. → 3 — Connect. →

Use the cloud provider of your choice:

- Amazon Web Services
- Microsoft Azure
- Google Cloud Platform
- Any other you wish to contract

CloudTap™ facilitates:

- Extension of your network into the cloud
- Cost-effective storage
- Greater flexibility
- Secure use of cloud-based applications
- Streamlined network interconnection

Consistent and Scalable Bandwidth

Choose the appropriate bandwidth for your company's operations. Bandwidth options up to 10 Gbps are available.

Optional Redundant Connections

Build redundancy into your cloud connection to minimize risk and ensure operations 24x7x365.

How CloudTap Works

We securely connect your Data Foundry deployment and office to the cloud via cross-connects. Alternatively, we can connect your corporate office directly to the cloud. Both are secure and reliable connections that do not traverse the public Internet.

Connection Options

- Layer 2 and layer 3 configuration
- Multiple connection speed options based on provider
- IP address management
